

INGENUITY UNLEASHED

GOALS, DATA TABLES, AND SASB INDEX 2025

TESSY'S GOALS, DATA TABLES, AND SASB INDEX REPORTING YEAR 2025

This report highlights activities across Tessy operations in New York from January 1 through December 31, 2025. Our scope encompasses initiatives undertaken by Tessy during the calendar year unless otherwise indicated. Data given within this report mirrors information given within our most recent stewardship report and/or CDP responses. This report was developed in reference to the GRI Standards 2021 and in alignment with SASB standards for the Containers and Packaging industry, version 2023-12. Tessy New York facilities include: 3 facilities on the Elbridge Campus, 1 in Skaneateles, 1 in Auburn, 1 in Baldwinsville, and 3 in Webster (1 facility with active operation).

GOALS AND PROGRESS

	Our Commitments	Goals	2025 Progress	SDG
People	Ensure a healthy and safe environment for all employees. Implement enabling systems to promote employee well-being. Cultivate a learning and growth culture to support employee career development Conduct business with the highest ethical standards.	Reduce Total Recordable Incident Rate (TRIR) 20% by 2030 from a base year 2022 100% of employees trained on anti-harassment training annually 100% of employees receive performance evaluation annually 100% of employees trained on cybersecurity annually 100% of targeted employees receive fair competition training every three years	Increased by 15% Maintained Maintained Maintained Maintained	SDG 3: Good Health and Well-being SDG 8: Decent Work and Economic Growth
Planet	Climate: Set our Science-Based Targets and source low-carbon energy for our facilities. Water: Manage our water resources sustainably. Waste: Manage our waste to reduce its environmental impact.	1) Reduce absolute scope 1 and 2 GHG emissions: 42.00% by 2030 from a 2022 base year. 2) Reduce absolute total scope 3 GHG emissions: 25.00% by 2030 from a 2022 base year. Maintain 100% water regulatory compliance 100% of targeted employees trained on Operation Clean Sweep annually 100% of the employees have access to Water and Sanitation facilities Reduce water intensity by revenue: 10% by 2030 from a base year of 2020 Limit waste to 1 lb. of trash per employee per day by 2025 Seek zero waste to landfill for 50% of our sites by 2030	10% decrease 3% decrease One event of exceedance Maintained Maintained Water Intensity increased by 3% 1.39 lb. of trash/employee/day 84% of the waste diverted	SDG 3: Good Health and Well-being SDG 9: Industry Innovation and Infrastructure SDG 13: Climate Action
Product	Engage customers and suppliers to design sustainable products, enhance production efficiency, and streamline distribution. Implement responsible procurement by engaging suppliers.	80% of customers engaged by 2030 100% of the target suppliers screened using environmental and social criteria annually	54% of customers engaged. Maintained	SDG 3: Good Health and Well-being SDG 9: Industry Innovation and Infrastructure SDG 12: Responsible consumption and production

CONTRIBUTION TO SDG GOALS

TESSY'S CONTRIBUTION TO SDG

Tessy's Commitments	SDG 3 Good health and well-being	SDG 8 Decent Work and Economic Growth	SDG 9 Industry Innovation and Infrastructure	SDG 12: Responsible Consumption and Production	SDG 13: Climate Action
People: Putting People First

Climate and Energy			9.4		13.3
Water				12.4	
Waste Reduction				12.4 and 12.5	

TESSY'S CONTRIBUTION TO SDG

SDG 3 - Good Health and Well-being

We are committed to the health and safety of our employees and are guided by our Environmental, Health, and Safety Policy. We provide health and safety training, engineering controls, and protective equipment to employees to prevent exposure to hazardous chemicals and to air, water, and soil contaminants. We regularly conduct risk assessments, inspections, and audits of our facilities and maintain our ISO 14001 certification in Environmental Management Systems. Through these efforts, we contribute to Target 3.9.

By promoting the treatment of our employees' mental health and well-being, we contribute to Targets 3.4 and 3.5. Our health benefits now include comprehensive health insurance, dental and vision, basic life insurance, paid family leave, and disability benefits. All employees and family members have free access to the Employee Assistance Program, a resource to support health and mental wellness.

Our facilities are ISO 13485 certified in Quality Management Systems, which ensures the diagnostics and medical devices produced meet customer specifications. We implemented a new technology in 2024, which rapidly scans several hundred parameters of a life-saving surgical device during production, ensuring the highest quality. In 2025, we achieved Safe Quality Food (SQF) certification at one of our manufacturing plants. By manufacturing products that help fight communicable and non-communicable diseases, Tessy contributes to Target 3.3 and 3.4.

Target 3.3: Fight communicable diseases

Target 3.4: Reduce mortality from non-communicable diseases and promote mental health

Target 3.5: Prevent and treat substance abuse

Target 3.9: Reduce illness and deaths from hazardous chemicals and pollution

TESSY'S CONTRIBUTION TO SDG

SDG 8: Decent Work and Economic Growth

Tessy is also committed to promoting a safe and secure working environment for all workers by implementing our Human Rights and Labor and Environmental, Health, and Safety policies. We contribute to Target 8.5 by employing over 1000+ employees each year and providing competitive wages and benefits. In 2025, Tessy initiated a quarterly profit-sharing program and shared over 10 million with employees. All eligible employees are automatically enrolled in the company retirement plan and receive a 4% company match. In 2025, 96% were enrolled in the program. Tessy also sets expectations with our suppliers to safeguard human rights in their workforce through its supplier code of conduct.

We contribute to Target 8.2 to improve economic productivity through technological upgrading and innovation in contract manufacturing. Tessy automates labor-intensive processes for several of its production and assembly lines. In 2025, over 130+ automation cells were operated by highly skilled employees, eliminating labor-intensive tasks. Tessy contributes to Target 8.4 by improving resource efficiency in our production lines using hot runners and a closed-loop water cooling system. We reuse and recycle materials such as purged resin and cardboard boxes.

Tessy contributes to Target 8.6 by supporting early-career employees to grow within the company. Tessy's internal hire rate for 2025 was 23.5%, training employees within the company. Tessy supported youth education and training by organizing guided tours of our facilities for high school students and formalized a partnership with the Museum of Science and Technology to host STEM events for the community. Target 8.2: Diversify, innovate and upgrade for economic productivity

Target 8.2: Diversity, innovate and upgrade for economic productivity

Target 8.4: Improve resource efficiency in consumption and production

Target 8.5: Full employment and decent work with equal pay

Target 8.6: Promote youth employment, education and training

TESSY'S CONTRIBUTION TO SDG

SDG 9: Industry, Innovation and Infrastructure

Tessy was awarded the 2024 Plastics News Sustained Excellence Award, recognizing Tessy's achievement in innovation. Tessy contributes to Target 9.4 by investing in Research and Development for technological innovation. A team of 200 engineers is equipped with cutting-edge technology to prototype sustainable product designs. In 2025, Tessy increased mold cavitation to increase output for a production line. Tessy also streamlined production, automation, assembly, final kitting, and shipment, reducing material and energy waste. Our facilities use a building energy management system optimizing energy consumption based on real-time operational requirements and daily weather conditions. Energy-efficient lighting and production equipment are used in our facilities.

Target 9.4: Upgrade all industries and infrastructures for sustainability

SDG 12: Responsible Consumption and Production

Tessy contributes to Target 12.4 by responsibly managing our chemicals and waste. All our facilities are ISO 14001:2015 certified and implement a robust Environmental Management System. Any chemical entering our facilities requires a Safety Data Sheet and approval from the Environmental, Health, and Safety department. In 2024, one of our EHS specialists received their Certified Hazardous Materials Manager certification. Our hazardous and non-hazardous waste is managed in full compliance with state and federal regulations. We follow the Operation Clean Sweep program to prevent resin loss from entering the local ecosystem. We also contribute to Target 12.5 on reducing waste generation. In 2025, our ESG analyst completed the Total Resource Use and Efficiency(TRUE) certification program. In 2025, we diverted over 80% of our waste from landfills by either recycling, reusing, or reclaiming materials. Our responsible procurement policies and practices contribute to Target 12.7 by implementing sustainable procurement practices.

Target 12.4: Responsible management of chemicals and waste; Target 12.5: Substantially reduce waste generation; Target 12.7: Promote sustainable public procurement

TESSY'S CONTRIBUTION TO SDG

SDG 13: Climate Action

Recognizing that climate action is critical at all levels, Tessy measures its GHG emissions and sets targets to reduce its emissions. In 2024, Tessy set near-term science-based targets to reduce absolute scope 1 and 2 GHG emissions by 42% from a 2022 base year by 2030. Tessy also committed to reducing absolute scope 3 GHG emissions from purchased goods and services, upstream and downstream transportation and distribution, and end-of-life treatment of sold products by 25% within the same timeframe. Tessy is collaborating with its customers and suppliers to implement the decarbonization plan to achieve its targets. In 2025, we sourced 43% of low-carbon energy through virtual Power Purchase Agreements and energy credits. Our facilities and operations are energy-efficient, using LED lighting, electric presses, and a building energy management system. Compared to 2022, Tessy's combined Scope 1 and 2 emissions decreased by 10% and Scope 3 by 3%.

Target 13.3: Build knowledge and capacity to meet climate change

SASB INDEX

The Sustainability Accounting Standards Board (SASB) categorizes Tessy within its Containers and Packaging Industry, under its Sustainable Industry Classification System (SICS). Our SASB response is a supplement to our Annual Stewardship Report 2025.

GREENHOUSE GAS EMISSIONS

SASB CODE	METRIC	DATA/ RESPONSE
RT-CP-110a.1	Gross global Scope 1 emissions, percentage covered under emissions-limiting regulations	Gross global Scope 1 emissions in 2025: 3,919.45 metric tons CO ₂ e. (0% under an emission-limiting regulation).
RT-CP-110a.2	Discussion of long-term and short-term strategy or plan to manage Scope 1 emissions, emissions reduction targets, and an analysis of performance against those targets	In 2024, Tessy's science-based targets for emission reduction were approved by SBTi. The scope of the targets includes all direct Tessy operations in the United States and Shanghai, China. Tessy Plastics Corp commits to reducing absolute scope 1 and 2 GHG emissions 42% by 2030 from a 2022 base year. Tessy Plastics Corp also commits to reducing absolute scope 3 GHG emissions from purchased goods and services, upstream and downstream transportation and distribution, and end-of-life treatment of sold products by 25% within the same timeframe. Compared to 2022, Tessy's combined Scope 1 and 2 emissions decreased by 10% and Scope 3 by 3%. The strategy for emissions reduction for Scope 1 and 2 includes the implementation of energy efficiency projects and purchasing 80 to 90% low-carbon energy. Achieving Scope 3 emission reduction targets includes using raw materials with lower emissions, such as recycled materials, and producing products with a lower carbon footprint by engaging customers and suppliers. A risk to achieving the Scope 3 target is the unavailability of alternative low-emission materials that are approved by customers.

AIR QUALITY

SASB CODE	METRIC	DATA/ RESPONSE
RT-CP-120a.1	Air emissions of the following pollutants: 1) NOX (excluding N ₂ O) 2) SOX 3) Volatile organic compounds (VOCs) 4) Particulate matter (PM)	Tessy is currently not disclosing air emissions; however, we are reporting our GHG emissions as metric tons CO ₂ equivalent of CO ₂ , CH ₄ , N ₂ O, HFCs, PFCs, SF ₆ , NF ₃ . Tessy has not identified any significant NOX, SOX, VOCs, and PM emissions at our sites.

ENERGY MANAGEMENT

SASB CODE	METRIC	DATA/ RESPONSE
RT-CP-130a.1	1) Total energy consumed 2) Percentage grid electricity 3) Percentage renewable 4) Total self-generated energy	1) Total Energy consumed: GJ • Heating: 73,819.81 GJ • Generator: 53.47 GJ • Vehicles: 1541.48 GJ • Propane: 109.39 GJ • Electricity: 394,372.64 GJ 2) Percentage grid electricity: 100% 3) Percentage renewable: 44% from hydropower vPPA, Green-e Certified wind power, nuclear 4) Total self-generated energy: Not applicable

WATER MANAGEMENT

SASB CODE	METRIC	DATA/ RESPONSE
RT-CP-140a.1	1) Total water withdrawn 2) Total water consumed, percentage of each in regions with High or Extremely High Baseline Water Stress	1) Total water withdrawn: 124.92 thousand cubic meters (0% in regions with high or extremely high baseline water stress) 2) Total water consumed: 124.92 thousand cubic meters (0% in regions with high or extremely high baseline water stress) Freshwater is the source of our water withdrawn and consumed through municipal water utility providers.
RT-CP-140a.2	Description of water management risks and discussion of strategies and practices to mitigate those risks.	Based on water risk assessment using the WWF water risk filter, Tessy is not located in water-stressed regions and withdraws water from water-abundant Central New York freshwater sources. Interannual and seasonal water availability is low, including impacts from climate change on water availability. All our production facilities have closed-loop water systems where water is reused for all cooling processes. Water is consumed through evaporation from the water cooling towers. We monitor the municipality's annual water reports to anticipate any major changes to water availability and water quality.

WATER MANAGEMENT

SASB CODE	METRIC	DATA/ RESPONSE
RT-CP-140a.3	Number of incidents of non-compliance associated with water quality permits, standards, and regulations.	One incident of State Pollutant Discharge Elimination System (SPDES) permit exceedance was reported in 2025.

WASTE MANAGEMENT

SASB CODE	METRIC	DATA/ RESPONSE
RT-CP-150a.1	Amount of hazardous waste generated, percentage recycled.	In 2025, 3 metric tons of hazardous waste was generated. 0% was recycled.

PRODUCT SAFETY

SASB CODE	METRIC	DATA/ RESPONSE
RT-CP-250a.1	Number of recalls issued, total units recalled.	As a third-party manufacturer, we do not issue product recalls from consumers. We did not recall any products from our customers.
RT-CP-250a.2	Discussion of process to identify and manage emerging materials and chemicals of concern.	We are committed to meeting all regulatory requirements and customer design specifications. Our product design and raw materials are selected by customers. We work with our customers to meet their product safety standards, product labeling requirements, and end-of-life treatment. Our Quality Policy and Environmental, Health, and Safety Policy provide guidance on running safe and healthy facilities. Our facilities are ISO 13485- and ISO 14001-certified. Our Quality Management System and Environmental Management System are applied to identify areas of concern (aspects) and manage associated risks. Each new material purchased undergoes a Production Part Approval Process to assess the environmental risks along with employee health and safety risks, and appropriate risk management processes are triggered. These can include updating PPE requirements for material handling, creating new waste streams and waste profiles. Safety Data Sheets for all materials are obtained and made accessible to all employees.

PRODUCT LIFECYCLE MANAGEMENT

SASB CODE	METRIC	DATA/ RESPONSE
RT-CP-410a.1.	Percentage of raw materials from: (1) recycled content, (2) renewable resources, and (3) renewable and recycled content	Tessy is a third-party contract manufacturer. Tessy's customers provide product design specifications, raw materials, and often select suppliers. Currently, less than 1% of raw materials include recycled content (post-consumer recycled content and post-industrial recycled content). Challenges such as feedstock for recycled resin that can meet the quality standards of products slow down the integration of recycled content in final products.
RT-CP-410a.2.	Revenue from products that are reusable, recyclable, or compostable	Tessy is a third-party contract manufacturer. Tessy's customers provide product design specifications, raw materials, and often select suppliers. Our consumer products are considered technically recyclable based on the definition by the Ellen MacArthur Foundation. About 35% of our revenue is from consumer goods, while the rest is from medical customers.

PRODUCT LIFECYCLE MANAGEMENT

SASB CODE	METRIC	DATA/ RESPONSE
RT-CP-410a.3	Discussion of strategies to reduce the environmental impact of packaging throughout its lifecycle	Our commitments are centered around People, Planet, and Product. As a third-party manufacturer of product parts, we engage our customers and suppliers on 1) Sustainable Product Design • Trial and implement alternative raw materials, including recycled and bio-based resins, and assess their impact on the function, aesthetics, costs, and environment. • Explore options to use less raw material by light-weighting the product • Promote circular economy by improving the recyclability of the product by using single materials, easily removable labels, and adding recyclability information 2) Streamlined Distribution • Analyze and evaluate product design for assembly, packaging, and distribution solutions • Develop a custom design for packaging that eliminates the need for additional packaging across the supply chain • Implement in-house packaging where possible to ship finished products directly to the customer's distribution centers, reducing the time and number of distribution points • Use reusable and returnable pallets and boxes, especially for domestic customers. • Optimize transportation modes to reduce carbon emissions, for example, sea routes instead of air.

SUPPLY CHAIN MANAGEMENT

SASB CODE	METRIC	DATA/ RESPONSE
RT-CP-430a.1.	Total wood fibre procured; percentage from certified sources	Tessy does not use any significant amounts of wood-fibre products to produce finished products.
RT-CP-430a.2	Total aluminum purchased; percentage from certified sources	Tessy does not procure any significant amount of aluminum. Resin remains our top commodity spend and is the material for which we have the most purchasing visibility.
